

Today's assignment

We are starting ch 1 rational number of maths. Students have to watch video of introduction and understand about the properties of rational number. Remaining videos are of how to solve sum based on the properties of rational numbers. Students have to watch videos properly and they have to make one fair note book of maths (in case they don't have new book, they can use previous class 7's maths note book). In the notebook, based on the video they have to solve Ex 1.1 Q-1(i), Q-1(ii),Q-2. Each and every students have to do sums. Any time we can ask for submission of their work. If you have any doubts, you can tell me.
